Proposal for Bullex Fire Extinguisher Service

The LAHCFD purchased over 5 years ago a prop for me to use in teaching fire extinguishers to the citizens of our community. This fire extinguisher prop has been used numerous times at CERT Training classes, special events such as the Annual Picnic and other programs taught by me for the LAHCFD.

The Bullex Extinguisher system is in need of some servicing. It does not always light when needing to light, it goes out when any short burst of the water fire extinguisher is applied and other minor issues.

It is time for a service.

I have contacted the manufacture of the Bullex System, they are located in Albany New York. They do not have a service representative in our area or anywhere but New York.

I am proposing that we send the entire propane type unit in for servicing to their company in New York.

I recommend that we have Table 1 performed by their company.
Cost will be approximately \$700 plus shipping \$100-200.

I would like to be able to have this unit sent in during the month of November so that we will have it for our next CERT class in 2014.

If approved I can fill out all the necessary forms to complete the request and servicing of the Bullex Unit.
